Singing • Video Editing • Coding

Objective

Motivated Computer Science Engineering student specializing in AI & Robotics, with hands-on experience in building real-world AI solutions. Passionate about developing intelligent systems, automation, and problem-solving through technology. Proven ability to work in teams and deliver impactful projects, including award-winning innovations.

Soft skills

- problem- solving skills
- communication and teamwork abilities
- Focussed on work
- Time management

Awards

1st Place – CodeShield Hackathon (Cyber Odyssey 2026) at IEM (Project: SafeSignal), IEM,Newtown

Selected in Top 10 – GDG On Campus Hackathon, GDG ON CAMPUS, UEM

Projects

SafeSignal, AI Emergency Detection System
Built an AI-based emergency detection system using MediaPipe, OpenCV, Flask, React, Twilio, Cloudinary Detects SOS gestures and sends alerts with location + visual evidence Designed for real-time safety monitoring and emergency response

Scan & Go, Smart Checkout System
Developed a smart retail solution allowing users to **scan products and checkout without standing in queues.**Enables **real-time product scanning and instant billing** using mobile devices.Reduces checkout time and improves customer experience in **supermarkets and retail stores.**Designed to minimize **human interaction and waiting lines.**Focused on fast, seamless, and contactless shopping
